

**IN THE CLAIMS:**

1. (currently amended) A frameless, portable, layout flexible hunting blind with minimal supporting framework adapted to enclose a sitting or reclining hunter, the hunting blind comprising:

- (a) a frameless floor;
- (b) an enclosed foot sack having an opening adapted to receive the hunter's legs;
- (c) a movable flap attached to the floor and adapted to cover the hunter's body;
- (d) a collapsible foot sack support attached to the foot sack opening and adapted to keep the foot sack opening clear of the hunter's legs; and
- (e) an air-inflatable head rest.

2. (original) The hunting blind of claim 1, wherein the collapsible foot sack support further comprises a substantially horizontal first bar attached to the foot sack opening, a vertical second bar attached to the substantially horizontal first bar, and a substantially horizontal foot attached to the vertical second bar and engaging the floor.

3. (original) The hunting blind of claim 2, wherein the first bar, second bar, and foot are a single piece.

4. (original) The hunting blind of claim 1, wherein the air-inflatable headrest is removably attached to the floor.

5. (original) The hunting blind of claim 1, further comprising a cushion positionable on the floor.

6. (original) The hunting blind of claim 5, wherein the cushion is removable from the hunting blind.

7. (currently amended) A frameless, portable, layout flexible hunting blind with minimal supporting framework adapted to enclose a sitting or reclining hunter, the hunting blind comprising:

- (a) a frameless floor;
- (b) an enclosed foot sack having an opening adapted to receive the hunter's legs;
- (c) a movable flap attached to the floor and adapted to cover the hunter's body;
- (d) a collapsible foot sack support attached to the foot sack opening and adapted to keep the foot sack opening clear of the hunter's legs; and
- (e) an air-inflatable head and shoulder rest, wherein the air-inflatable headrest is removably attached to the floor.

8. (original) The hunting blind of claim 7, wherein the collapsible foot sack support further comprises a substantially horizontal first bar attached to the foot sack opening, a vertical second bar attached to the substantially horizontal first bar, and a substantially horizontal foot attached to the vertical second bar and engaging the floor.

9. (original) The hunting blind of claim 8, wherein the first bar, second bar, and foot are a single piece.

10. (original) The hunting blind of claim 7, further comprising a cushion positionable on the floor.

11. (original) The hunting blind of claim 10, wherein the cushion is removable from the hunting blind.

12. (currently amended) A frameless, portable, layout flexible hunting blind with minimal supporting framework adapted to enclose a sitting or reclining hunter, the hunting blind comprising:

- (a) a frameless floor;
- (b) an enclosed foot sack having an opening adapted to receive the hunter's legs;
- (c) a movable flap attached to the floor and adapted to cover the hunter's body;
- (d) a collapsible foot sack support attached to the foot sack opening and adapted to keep the foot sack opening clear of the hunter's legs;
- (e) an air-inflatable head rest, wherein the air-inflatable headrest is removably attached to the floor; and
- (f) a cushion positionable on the floor.

13. (original) The hunting blind of claim 12, wherein the collapsible foot sack support further comprises a substantially horizontal first bar attached to the foot sack opening, a vertical second bar attached to the substantially horizontal first bar, and a substantially horizontal foot attached to the vertical second bar and engaging the floor.

14. (original) The hunting blind of claim 13, wherein the first bar, second bar, and foot are a single piece.

15. (original) The hunting blind of claim 12, wherein the cushion is removable from the hunting blind.

16. (original) The hunting blind of claim 12, further comprising side supports for the floor.

17. (original) The hunting blind of claim 12, wherein the collapsible foot sack support pivots about the foot sack opening.

18. (previously presented) The hunting blind of claim 1, wherein the movable flap further comprises two flaps that meet to cover the hunter's body.
